

MOTORCRAFT® FUEL DELIVERY MODULES

Engineered for Maximum Performance

- Motorcraft® Fuel Delivery Modules (FDM) are designed and calibrated as an integral component of the complete fuel system
- Features include:
 - Lifetime fuel filter under normal conditions
 - In-tank location minimizes noise and vibration inside the vehicle
 - Anti drain-back design supports quick starts and minimizes cranking time
 - Connectors and fittings designed for positive, sure connections that resist leakage and breaking
- FDMs are complete assemblies, designed for each application, providing:
 - Optimum fuel pressure and flow rates
 - Accurate fuel gauge readings
 - Consistent performance
 - No assembly required

Designed and Built to Last

- Durability test specification – equivalent to 10 years/150,000 miles
- Designed for long life – each Motorcraft® FDM is subjected to over 70 laboratory & in-vehicle tests, including:
 - Performance testing for thousands of hours – covering all electrical and fuel-level operating ranges
 - EMC/RFI/ESD testing ensures the FDM does not interfere with other vehicle systems
 - NVH testing helps ensure quiet and smooth pump operation at all speeds, loads and fuel levels
 - Durability & performance testing using inferior quality fuels helps ensure optimum performance in adverse conditions
 - Additional adverse condition testing using blends and additives like methanol, ethanol, stabilizers and additives at levels that exceed most regulations and/or product user instructions

Single stage turbine fuel pump

- Optimum pressure and flow rates
- Precision-balanced armature for quiet operation
- Lifetime fuel filter

OE connectors, fittings and fuel level sensor

- For leak-free and positive connections
- Application-specific sensor for accurate fuel level readings
