

MOTORCRAFT®

NEW & REMANUFACTURED

MAF SENSORS

What They Do

Mass Airflow (MAF) Sensors measure the airflow rate into the engine and provide a signal to the engine control system to regulate the quantity of fuel injected into the engine.

Motorcraft® MAF Sensor Features

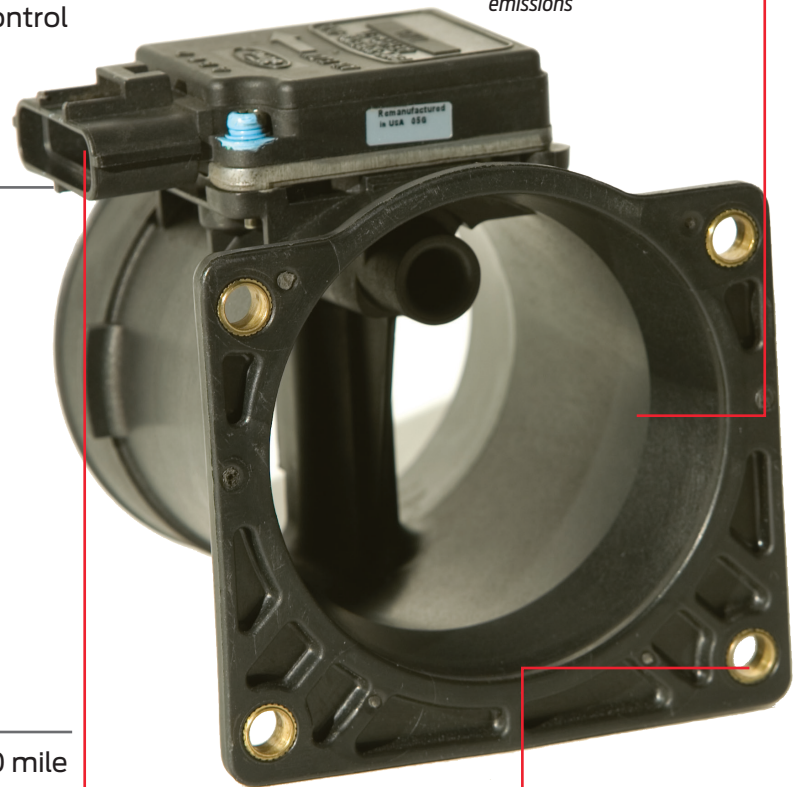

- New or Remanufactured are available and meet original equipment performance specifications
- Exact fit for each application means no hassle “plug and play” installation – no modifications required
- Helps optimize fuel consumption and emissions
- Reman sensors are rebuilt to meet tight tolerances (+/-3%) to help minimize false “check engine” lights and comebacks
- Excellent availability for most Ford Motor Company vehicles

Design and Testing

- Key life tested to the equivalent of 10 year/150,000 mile lifetime
- Environmental testing helps ensure proper operation in extreme conditions

Precise

- Precise metering for peak performance and optimized emissions

Value

- Remanufactured sensors provide a lower cost alternative to new with excellent performance

Rugged

- Flanges and housing designed for long life

MOTORCRAFT®
WARRANTY

UNLIMITED
MILEAGE
INCLUDES LABOR

2 YEARS

Limited labor costs. See seller for warranty details.
