Fuel Injectors

Motorcraft Remanufactured fuel injectors precisely control the delivery of the fuel into the combustion chamber to ensure smooth engine performance.

- 6.4L OE specifications help ensure proper fuel delivery to each cylinder resulting in a smoother running engine
- 6.0L New coil assemblies with slotted end caps help improve durability and engine performance in cold start conditions
- 7.3L OE specifications help ensure quality and durability

High Pressure Pumps

Motorcraft High Pressure Pumps are designed and engineered by Ford Motor Company specifically for Power Stroke Diesel vehicles to ensure quality and durability.

Turbos

Motorcraft diesel turbochargers aren’t just repaired or rebuilt, they undergo an extensive remanufacturing process that ensures they comply with strict OE specifications. No aftermarket turbocharger can make this claim.

- Wear items, such as bearings and gaskets, are automatically replaced
- Parts are inspected, cleaned and measured and those not meeting OE specifications are replaced with OE-approved replacement parts

Fuel Injection Control Modules

Only Genuine Motorcraft Reman Fuel Injection Control Modules (FICMs) feature proprietary engineering enhancements. Product engineering and reman processes are continuously improved to minimize downtime and repair expense while maximizing durability and performance.
